- Stocks: 60%
- Bonds: 30%
- Cash: 10%

### Economic Parameters:

- Risk-Free Rate: 3.0%
- Equity Risk Premium: 4.0%
- Rate Persistence ( $\phi$ ): 0.85

### Key Insights:

-----

1. Human capital dominates early in life, making total wealth equity-like even with conservative financial portfolio.
2. Financial portfolio should start with HIGH stock allocation (even 100%) to offset bond-like human capital.
3. As human capital depletes near retirement, financial portfolio naturally shifts toward target allocation.
4. Duration matching becomes critical in retirement when human capital is exhausted.
